

Project Delivery Management

Technology Platform Evaluation and Project Management

A firm directly involved in increasing liquidity in the Asset-Backed Securities markets during the 2008 financial crisis needed an alternative to the initially implemented solution used to facilitate ABS loan bid entry. The firm needed consulting expertise to determine needs and implement an improved solution.

Approach

Katahdin Solutions was engaged to evaluate alternatives and manage the implementation of a replacement solution. Our project efforts included:

- Capturing an understanding of solution needs, issues, and technical challenges
- Identifying potential solution options which could be implemented rapidly
- Objectively evaluating and recommending solution options
- Managing projects to build a new Bloomberg-based bidding platform, and improve solution security

Katahdin also assisted in designing elements of the new application.

Results

The solution was defined and implemented over a six-week period, at very low cost and without interrupting established weekly processes, despite solution scope expanding midstream to handle CMBS products midstream.

Through information technology and advisory capabilities, Katahdin Solutions provides consulting services to organizations seeking to achieve greater efficiency and value from their project delivery and compliance initiatives.
